

METHAVET Bolus

Promethazine Hydrochloride

COMPOSITION:

Methavet bolus: Each bolus contains Promethazine Hydrochloride BP 150 mg.

PHARMACOLOGY:

Promethazine Hydrochloride is an Ethylamino derivative of Phenothiazine and 1st-generation antihistamine. Promethazine, a phenothiazine, is an H₁-antagonist with anticholinergic, sedative, and antiemetic effects and some local anesthetic properties. Promethazine is used as an antiemetic or to prevent motion sickness. Like other H₁-antagonists, Promethazine competes with free histamine for binding at H₁-receptor sites in the GI tract, uterus, large blood vessels, and bronchial muscle. The relief of nausea appears to be related to central anticholinergic actions and may implicate activity on the medullary chemoreceptor trigger zone.

INDICATION:

For the treatment of allergic disorders, and nausea/vomiting, urticaria, rhinitis, insects bite, serum sickness, anaphylactic shock, drug allergy, synovitis, milk allergy, laminitis, mastitis, fever due to hypersensitivity, moist eczema, pulmonary emphysema.
